Hands Across Eau Claire

Hillside Dental will be sponsoring a hand for the Children's Museum of Eau Claire. The 2011 Hands Across Eau Claire project is the museum's major fund-raiser and community art project. The finished "hands" were unveiled before the Eau Claire Express Baseball game on June 20 and ours will become part of our permanent landscape. The artist for our hand was Debbie Brooks of Menomonie and is titled: "Changing of the Children". It is a colorful hand depicting children changing like colors as they grow.

NEWEST ADDITION TO OUR STAFF WELCOME!

KIMBERLY HONG
Hillside Dental is pleased to welcome Kim to our dental hygiene department. Kim's pleasant and caring personality is a wonderful addition to our team.

FAMILY DAY COMING THIS SUMMER.....

On Tuesday, August 23, Hillside Dental will open the doors for family dental appointments-this is a day we dedicate our entire staff to your **preventive** dental health. We will be reserving Exam & Cleaning appointments (& treating any emergencies, of course) for families scheduling together. We will have drawings for prizes and serve lemonade & snacks. It is a great day to share some family time before school begins! Call soon to reserve your time.

Toothpaste in a Tube

In 1892, Dr. Sheffield's Creme Dentifrice was the first packaged toothpaste in a collapsible metal tube, or the compressible tube, as it was sometimes called. Dr. Washington Wentworth Sheffield, a New London, Connecticut, dentist, devised the successful idea. Previously, toothpaste was packaged in porcelain jars. To use, you simply dropped a toothbrush into the jar's paste and took what you needed...but so did other family members. Sheffield's tube was both convenient and sanitary. Its air-tightness kept the toothpaste from drying out, while the collapsible tube packaging lowered the overall price of toothpaste and spawned the tooth-cleaning industry.

Did you know.....

Paul Revere -known for his famous ride and his work as a silversmith, put ads in a Boston newspaper offering his services as a dentist. Revere, in fact, is the first person known to use dental forensics, to identify the body of a colonial colonel killed at the Battle of Bunker Hill by the bridge appliance he was wearing.
